DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, 32-36 and 43-45, drawn to a method and device for displaying a link status image in an electronic information label system. The link status image is a predefined image stored in an IEL storing means, classified in class 345, subclass 530.
- II. Claims 19-24 and 31, drawn to an electronic information label where the display unit is detachably attached to the control unit via mating connection means, classified in class 345, subclass 1.1.
- III. Claims 25-30 and 46-48, drawn to an electronic information label system, including a double sided display, classified in class 345, subclass 1.1.
- IV. Claims 37-42, drawn to an invertible type display, arranged to invert the display image., classified in class 345, subclass 30.

The inventions are distinct, each from the other because of the following reasons: Inventions I-IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I-V has separate utility such as claims 1-18 and 32-36 and 43-45 relates to the problem of indicating the link status on a display, where the image indicating the link status is a predefined image, stored in order to save

time and energy when used. This problem appears to be solved by storing a predefined image in an IEL storing means. Claims 19-24 and 31 relates to the problem of attaching a display unit detachably to a Control unit via mating connection means. This problem appears to be solved by applying a detachable mating connection (62) to the display. Claims 25-30 and 46-48 relates to the problem of displaying information in two directions simultaneously. This problem appears to be solved by using a double sided display. Claims 37-42 relates to the problem of using an invertible type display. This problem appears to be solved by using a invertible type display. See MPEP § 806.05(d).

Page 3

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

Application/Control Number: 10/590,341 Page 4

Art Unit: 2629

(a) the inventions have acquired a separate status in the art in view of their different classification;

- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C.101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after

Art Unit: 2629

the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LENWORTH WOOLCOCK whose telephone number is (571)270-5152. The examiner can normally be reached on M-F 8:30am - 6pm.
